957-000-DS Issue 1

The most important thing we build is trust

The **957-000** is a folded-monopole antenna enclosed in a robust, fibreglass, radome, supported above an inclined counterpoise consisting of three, quarterwave, radial elements.

Operating over the frequency range of 115 MHz to 150 MHz, the antenna can be used at any frequency in the aeronautical VHF band.

The concentric clamp at the base of the radome allows the antenna to be mounted to a vertical pole that has a 35 mm to 60 mm diameter.
